

```
Enter the source node (0 to 4): 2
Node    Distance from Source 2
0        3
1        3
2        0
3        2
4        1
```

Output for exp 9 :

```
Routing table for Router 0:
Destination    Cost
0              0
1              2
2              5
3              1

Routing table for Router 1:
Destination    Cost
0              2
1              0
2              3
3              3

Routing table for Router 2:
Destination    Cost
0              5
1              3
2              0
3              4

Routing table for Router 3:
Destination    Cost
0              1
1              3
2              4
3              0
```
